

PRODUCTION WORKING HOUR ANALYSIS REPORT

The Production Working Hour Analysis Dashboard provides insights into employee productivity, planned working schedules, overtime performance, earnings, and workforce distribution across different divisions and cities. The dashboard helps organizations monitor operational efficiency, employee utilization, and financial performance through interactive visual analysis.

The dashboard records a total of 252 employees, including both male and female employees working across various departments. The total worked hours recorded are 3,68,148, while the total planned hours are 35,130. The organization also recorded 21,218 overtime hours, indicating additional employee effort to meet production and operational requirements. However, the dashboard highlights 9,086 shortfall hours, showing gaps between planned and completed work targets.

The main KPI metrics included in the dashboard are Total Employees, Total Worked Hours, Total Shortfall Hours, Total Overtime Hours, Total Planned Hours, Earned Amount, Overtime Earnings, and Budget Amount. These KPIs provide a quick overview of workforce productivity, operational efficiency, overtime contribution, and financial performance.

The dashboard uses multiple chart types for detailed visual analysis. The Division-wise Work Distribution uses a Clustered Column Chart to compare planned hours and worked hours across Management, Photography, and Supporting divisions. The Job Title & Gender Distribution is

represented using a Radar Chart to display male and female employee participation across different job roles such as Assistant, Cameraman, and Coordinator.

The Overtime Worked Hours by Employee section uses an Area Chart to display month-wise overtime trends and workload distribution. The Employee-wise Earnings section uses a Line Chart to show fluctuations in employee earnings throughout the year. The City-wise Overtime Earnings section is represented using a Horizontal Bar Chart to compare overtime earnings across cities such as Toronto, Tokyo, Sydney, Mumbai, Mexican, Chicago, Cape Town, Berlin, and Barcelona. The Budget vs Earnings by Division section uses an Area Chart to compare allocated budget and actual earnings generated across divisions.

Division-wise work distribution analysis reveals that the Photography division contributes the highest number of worked hours, indicating higher operational workload and productivity compared to other departments. The Supporting division also shows a significant contribution, while the Management division records comparatively lower working hours.

The Job Title & Gender Distribution analysis displays employee allocation across different job roles and helps visualize workforce diversity within the organization. The overtime analysis highlights that certain months recorded significantly higher overtime hours, indicating increased operational demand and project workload during those periods.

Employee-wise earnings analysis displays fluctuations in earnings depending on overtime contribution and workforce productivity. Higher earnings during certain months indicate increased operational activities and resource utilization. City-wise overtime earnings analysis shows that Toronto and Tokyo generated the highest overtime earnings, indicating greater overtime dependency and operational workload in these regions.

The Budget vs Earnings by Division analysis helps evaluate departmental profitability and financial efficiency. The Photography division records the highest earnings contribution, while Management and Supporting divisions contribute comparatively lower revenue.

The dashboard also includes interactive slicers for Division and City filtering. These slicers allow users to dynamically filter and analyze data according to department and regional performance, improving dashboard interactivity and business analysis capabilities.

Overall, the Production Working Hour Analysis Dashboard provides a comprehensive overview of employee productivity, overtime management, earnings performance, workforce allocation, and financial efficiency. The dashboard enables management to identify productivity gaps, optimize workforce planning, reduce overtime expenses, and improve overall organizational performance through data-driven decision-making.
